

Air blowing across chimney pulls air up

AIR 2

Maintain well ventilated fresh air

The window fan blows large volume of air out

Warm air infiltrates into cold attic

Warm air loads and overflows windows, draws air in under door and/or from heat vent

The window fan draws high volume volume of air across bed

Warm air and fumes from heater rise upstairs

Escorted air rises upstairs

The dryer exhaust blows over half this house's volume of air out replaced by fresh air volume

Vacuum created by chimney draws air through crawl space

leaky duct sucks air from crawl space into kitchen

Basement

leaky duct and basement vacuum sucks air through wall into

Air dries laundry

Air blowing across wall draws air out
