

Welcome to our healthy pest-free apartment homes!

We use Integrated Pest Management (IPM) to keep out both pests and toxic pesticide sprays. Pests can trigger asthma attacks and pesticides can poison. Our commitment to you is to protect your family's health using teamwork to eliminate pest environments: water, food and hiding places.

In order to keep your apartment pest-free, we ask that you:

report water leaks

1. *Inform us of water leaks so that we can promptly repair these. Depending on the type of leak, this repair may also reduce your water bill or prevent mold.*

keep food sealed

2. *Store food in sealed containers, dispose of garbage properly, and wash dishes after each use. If you use cardboard boxes to move in, please unpack them right away and remove the boxes from the apartment. Pests hide in the corrugated sides and may come inside without you even realizing it.*

report cracks

3. *Notify us of cracks and holes in walls or around windows and floors so we can seal these to keep pests out. (This repair may also reduce your heating and/or cooling bills). Clean up clutter to eliminate pest hiding places.*

look for signs of pests

4. *Let us know immediately if you see evidence of pests, but DON'T use pesticide sprays or powders that can endanger your family and interfere with IPM. Our pest management professionals target safe pest treatments to eliminate pests.*
