1. Cut a 4 in. hole in the floor next to the wall behind dryer. Ensure the hole is offset from the dryer exhaust connection.

2. Install a piece of rigid metal duct between the basement or crawlspace and the dryer location.

3. Attach a short piece of flexible vent pipe to the dryer connection and the rigid metal duct. Use metal band straps to secure the connections.

4. Cut a hole for the duct to exhaust at the exterior of the house above the snow line and 10 ft. away from the HVAC condenser and air intakes.

5. Select the fittings and ducts needed. There should be no more than two 90 degree elbows. Do not use flexible vent pipe if the length exceeds 6 ft.

6. Insert the exterior vent cap into the foundation wall hole and caulk as necessary.

7. Install duct pieces between rigid metal duct in basement or crawlspace and exterior vent cap.
