

CRITICAL DETAIL: EXTERIOR WALL SEALING

1. Find all penetrations through exterior walls. Look for water supply lines, drain pipes, electrical wiring, etc.

2. Select a caulk that is clear or will match the exterior walls.

3. For holes 1/4 in. or less, seal with water-proof polyurethane or silicone caulk.

4. For holes 1/4 in. or greater, install foam backer rod and copper mesh in the hole. Seal with water-proof polyurethane or silicone caulk.
