

CRITICAL DETAIL: DOOR WEATHERSTRIP INSTALLATION

ENERGY + HEALTH PROGRAM

1. Verify the door is not loose in the frame and that clearances between the door and frame are fairly even on all sides.

2. Verify the door opens, closes and latches easily.

3. Verify the hinges are securely screwed into the door frame and the door unit.

4. If necessary, replace the threshold and seal strip at the bottom of the door.

✓ CHECK DOOR FRAME

✓ CHECK HINGES

✓ CHECK DOOR BOTTOM

5. Measure and cut the gasket to head jamb length. Starting with the center mounting hole, press the gasket in place and screw it into the door jamb.

6. Repeat the previous step for both side jambs.

7. Verify door operates properly and no light is visible around the door.
