Unhealthy conditions found in hazardous housing can lead to lead poisoning, asthma, respiratory illness, cancer, and unintentional injuries, resulting in missed school days and poor school performance for children, as well as missed work days for parents. To protect the health of Mississippi’s families and prevent continued increases in associated healthcare costs and societal consequences, full federal funding is needed for critical programs and services:

- CDC’s Healthy Homes and Lead Poisoning Prevention Program
- CDC’s National Asthma Control Program
- CDC’s Environmental Health Tracking Network
- HUD’s Office of Lead Hazard Control and Healthy Homes
- HUD’s Community Development Block Grants (CDBG)
- HUD’s HOME Investment Partnerships Program
- EPA’s Lead Categorical Grants
- EPA’s Drinking Water Revolving Fund
- HHS’ Maternal and Child Health Block Grants
- HHS’ Low Income Home Energy Assistance Program (LIHEAP)
- DOE’s Weatherization Assistance Program

Full funding to federal programs such as these will help to address many of the risks and burdens facing the residents and families of Mississippi, including:

- In Mississippi, 31% of children live in households with a high housing cost burden, and 31% of children live in poverty.
- 45% of Mississippi housing was built before 1978 and is likely to contain lead-based paint.
- In 2011, there were 48 emergency department visits due to asthma for every 10,000 people in Mississippi. In 11 counties, this rate increased to over 69 visits per 10,000 people; in Humphreys County, it was over 100.
- Mississippi has no state statutes regarding carbon monoxide detectors, radon, or bed bugs.
- On average, 9 individuals die annually from carbon monoxide exposure in Mississippi (2011-2015).
- Unintentional falls were responsible for 237 deaths among people above the age of 65 in Mississippi in 2015.
- In 2015, 233 Mississippi children tested had an elevated blood lead level (5 μg/dL or more); 65% of these cases came from 20 high-risk counties.
- Approximately 7% of adults and 12% of children (2014) have current asthma in Mississippi.
