March 4, 2011

Dear Senator,

The National Safe and Healthy Housing Coalition, which represents a diverse group of public health, affordable housing, environmental, and energy-efficiency advocates, urges you to reject the House’s proposed deep cuts in a host of federal healthy homes programs that are essential to protecting the nation’s children and families from health hazards in and around their homes. We are deeply concerned that imposing such abrupt funding reductions will shred the protections that all Americans take for granted and will have unintended consequences that will be acceptable to no one.

The undersigned work hand-in-hand with federal agencies, including the Centers for Disease Control and Prevention (CDC), the U.S. Department of Housing and Urban Development (HUD), and the U.S. Environmental Protection Agency (EPA) to address hazards in housing and reduce asthma, lead poisoning, and injuries among our nation’s children and families. Our collaborative approach is to invest in preventing these health impacts now, rather than to pay later in lost workforce productivity and expenses to our health care and special education systems.

Such cuts would place a great burden on states and localities, add to job losses, and further weaken the federal-state-local infrastructure that is essential to protect the health of Americans:

- CDC: A massive reduction to CDC will jeopardize public health by arresting key healthy homes efforts and other programs. Using the Prevention and Public Health Fund to offset cuts in ongoing CDC activities is wholly inconsistent with the Fund's purpose of advancing prevention by supplementing current prevention and public health resources.
- HUD: HUD’s Healthy Homes and Lead Hazard Control Program has been ranked among the most successful federal government programs, with a high return on investment. Cutting this program will deny communities the resources to eliminate childhood lead poisoning and to reduce the burden of asthma. These diseases are most prevalent among our nation’s most vulnerable, including low-income and minority children and families. These cuts will further exacerbate existing health disparities.
- EPA: EPA's Renovation, Repair, and Painting Rule (RRP) protects 1.4 million children from lead poisoning each year. The proposed continuing resolution will hamper EPA's ability to enforce this lead safety rule and arrest programs protecting us from pesticides, radon, CO, and other hazards.

We urge you to oppose any cuts to healthy homes programs in the FY11 Continuing Resolution. Now is the time to increase, rather than decrease our ability to adequately protect our nation’s children and families. Thank you for your attention to protecting children from lead and other hazards in their homes as you face the difficult work of completing the FY11 budget.
