

Building Systems to Sustain Home-Based Asthma Services

Developed by the National Center for Healthy Housing and operating in collaboration with Regional Asthma Management and Prevention

E-Learning Modules

- Module 0. An Introduction
- Module 1. Overview of Sustainable Financing
- Module 2. Making the Business Case
- Module 3. Adapting Systems for Sustainability
- Module 4. Client Referral and Eligibility
- Module 5. Developing the Scope of Services
- Module 6. Assembling a Qualified Workforce
- Module 7. Selecting Supplies and Ancillary Services
- Module 8. Connecting and Collaborating for Sustainability
- Module 9. Program Evaluation and Reporting
- Module 10. Incorporating Virtual Visits into Home-Based Asthma Services
- Module 11. Building Healthy Indoor Environments with Healthcare (video log)
- Module 12. Racism, Housing, and Asthma: A Conversation (live webinar)

Key Readings and Resources

Over 100 specifically curated readings, module-specific lists of referenced URLs, and a glossary of key terms provide supporting resources to promote additional learning.

TA Tools and Mini-Modules

Expanded e-learning offerings include a suite of mini-modules and technical assistance tools that expand the breadth of topics covered and translate shared technical assistance experiences into accessible, informal examples.

New Resources and Tools

New resources, such as:

- *Unlocking the Power of Home-Based Asthma Services: Model Health Benefit Packages*, a tool for managed care plans and allies describing the scope, staffing, and services associated with home-based asthma services that identify and address environmental asthma triggers in the home environment. The tool includes tiers of services to provide a range of options for payers at different levels of readiness and includes recommendations to support action from critical stakeholders.
- *Roadmap to Sustainable Asthma Home Visiting*, an interactive tool to support action to provide in-home asthma services. Nine rearrangeable, primary waypoints are provided along with one possible route as an example for those who want a premade path.

Technical Assistance

Flexible, informal technical assistance is available to support and advance your efforts.
