Unhealthy conditions found in hazardous housing can lead to lead poisoning, asthma, respiratory illness, cancer, and unintentional injuries, resulting in missed school days and poor school performance for children, as well as missed workdays for parents. The requirement for safe and healthy housing has become even more urgent as people spend more time than ever in residential environments due to the COVID-19 pandemic. To protect the health of Puerto Rico families and prevent continued increases in associated healthcare costs and societal consequences, full federal funding is needed for critical programs and services.

Full funding to federal programs such as those listed above will help to address many of the risks and burdens facing the residents and families of Puerto Rico. For example:

- **In Puerto Rico, 29% of children live in households with a high housing cost burden, and 57% of children live in poverty.**
- **Puerto Rico does not require blood lead data reporting.** Blood lead prevalence (5 µg/dL) for children under six is estimated at over 3%.
- **54% of Puerto Rico housing was built before 1978** and is likely to contain lead-based paint.
- **In 2013, there were over 95,000 emergency room visits due to asthma in Puerto Rico.** The highest percentage of these claims originated from the Cagus region.
- **Over 97,000 children and 303,000 adults in Puerto Rico have current asthma,** about 14% and 11% of the population for each age group, respectively (2018).
- **97.2% of the population in Puerto Rico is served by water systems that violate EPA’s Lead and Copper Rule.**
- **Unintentional falls were responsible for 152 deaths in Puerto Rico in 2014; 107 of these deaths were among adults over the age of 65.**
- **FEMA reported a total of 357,492 homes damaged by Hurricane Maria as of May 11, 2018.** About 23% of Puerto Rico’s housing stock was affected.
